BULK HANDLING • TRANSPORTATION HANDOFFS • READINESS

Connect bulk dispatch. From arrival to departure.

inoBrix Intelligent Yard Logistics & Shipping Solution

An integrated inoBrix solution built on SAP that brings tanker movements, truck weights, loading activity and quality documents into one plant-shipping journey.

IS THIS RELEVANT TO YOUR PLANT?

- Bulk liquids leave by tanker through a weighbridge.
- Loading, quality and shipping teams use calls or separate trackers.
- Batch certificates, weights and documents need consistent references.

ONE REPRESENTATIVE SHIPMENT

One tanker. One batch. One outbound delivery.

A scheduled tanker collects a product batch. inoBrix connects operational handoffs alongside SAP delivery and goods-issue processing, helping teams see completed activities, available evidence and outstanding work.

01	02	03	04	05	06
Gate check-in	**Initial weighing**	**Loading**	**Quality & documents**	**Final weighing**	**Dispatch & departure**

Validate pickup → capture tare → record loading → complete applicable inspection / CoA → capture loaded weight → PGI, final BOL and checkout. Customer ASN follows PGI.

> Readiness means visibility of agreed evidence. Automated dispatch blocking, vehicle-suitability checks and safety approval enforcement are not established capabilities.

WHAT INOBRIX BRINGS TO BULK DISPATCH

Connect the work. Make the evidence easier to review.

Weight & delivery records

Associate tare and gross readings with shipment references to reduce repeated entry and reconciliation.

Plant handoffs

Tailored kiosk and loading workflows, inspection forms and milestones connect operational teams.

Readiness information

Review recorded weights, loading milestones and document status in the shipment context.

ONE INOBRIX SOLUTION, BUILT ON SAP

SAP standard	Sales and deliveries, inventory movements and goods issue; warehouse execution and QM inspection / certificate functions where deployed.
Configured SAP	Plant inspection plans, certificate profiles, output layouts and partner mappings.
inoBrix capabilities	Tailored kiosk validation, scale-to-shipment integration, loading Fiori screens, plant forms and milestone reporting.

EVALUATE WITH ONE SHIPMENT

EVIDENCE TO REVIEW	SUGGESTED MEASURE
Tare / gross events linked to delivery	Manual entry and reconciliation effort
Loading milestone, inspection and CoA references	Time spent chasing status
PGI, final BOL, checkout and ASN timing	Corrections, reprints and completeness

Agree a baseline before setting targets. These are evaluation measures, not measured savings. Distinguish live scale connectivity from simulation.

Assess the fit for your plant.

Bring process owners, scale specifications, batch data, sample CoA / BOL and carrier requirements.

Representative scenario, not a customer case study. Confirm features, SAP edition, licensing and modules; Public Edition requires validation. Product safety, dangerous-goods controls, suitability and release rules require plant-specific design.
