INTELLIGENT YARD LOGISTICS & SHIPPING SOLUTION

One connected journey. From gate to shipment.

SAP Powers the Enterprise.
inoBrix Orchestrates Yard & Shipping Operations.

An integrated inoBrix solution built on SAP. Connect plant teams, equipment and shipment information across gate activity, weighing, loading, quality and shipping documents.

SIX CONNECTED OPERATIONAL STEPS

01	02	03	04	05	06
Gate check-in	**Initial weighing**	**Loading**	**Quality & documents**	**Final weighing**	**Dispatch & departure**

Weighing and quality apply where required. Customer ASN follows goods issue where included.

THE INOBRIX DIFFERENCE

Plant workflows

Tailored kiosk validation, loading experiences and inspection forms support the teams doing the work.

Equipment connectivity

Link empty and loaded scale readings with SAP shipment processing.

Shipment visibility

Recorded milestones and document status help teams coordinate handoffs.

Built on SAP

Standard orders, deliveries and goods issue; warehouse and quality functions where deployed. Plant configuration covers inspection plans, certificates, output forms and partner mappings.

Priority applications

Chemicals: bulk dispatch and tanker weights.
Agribusiness: weighbridge-linked deliveries.
Automotive: proposed component-shipping / EDI application; labels and portals require confirmation.

Start with one plant. One representative shipment.

A discovery workshop defines process fit, priority gaps and evaluation scope.

Confirm features, SAP edition, licensing and modules. Public Edition compatibility requires validation. Automated dispatch blocking and vehicle-suitability controls are not established. System demo in development.
